*Three terms define the relative performance Z-Score rating versus the markets (US = S&P 500; GBL = MSCI AC World; CDA = S&P/TSX Composite)

(a) % Outperforming - what percentage of sector members is outperforming the market,

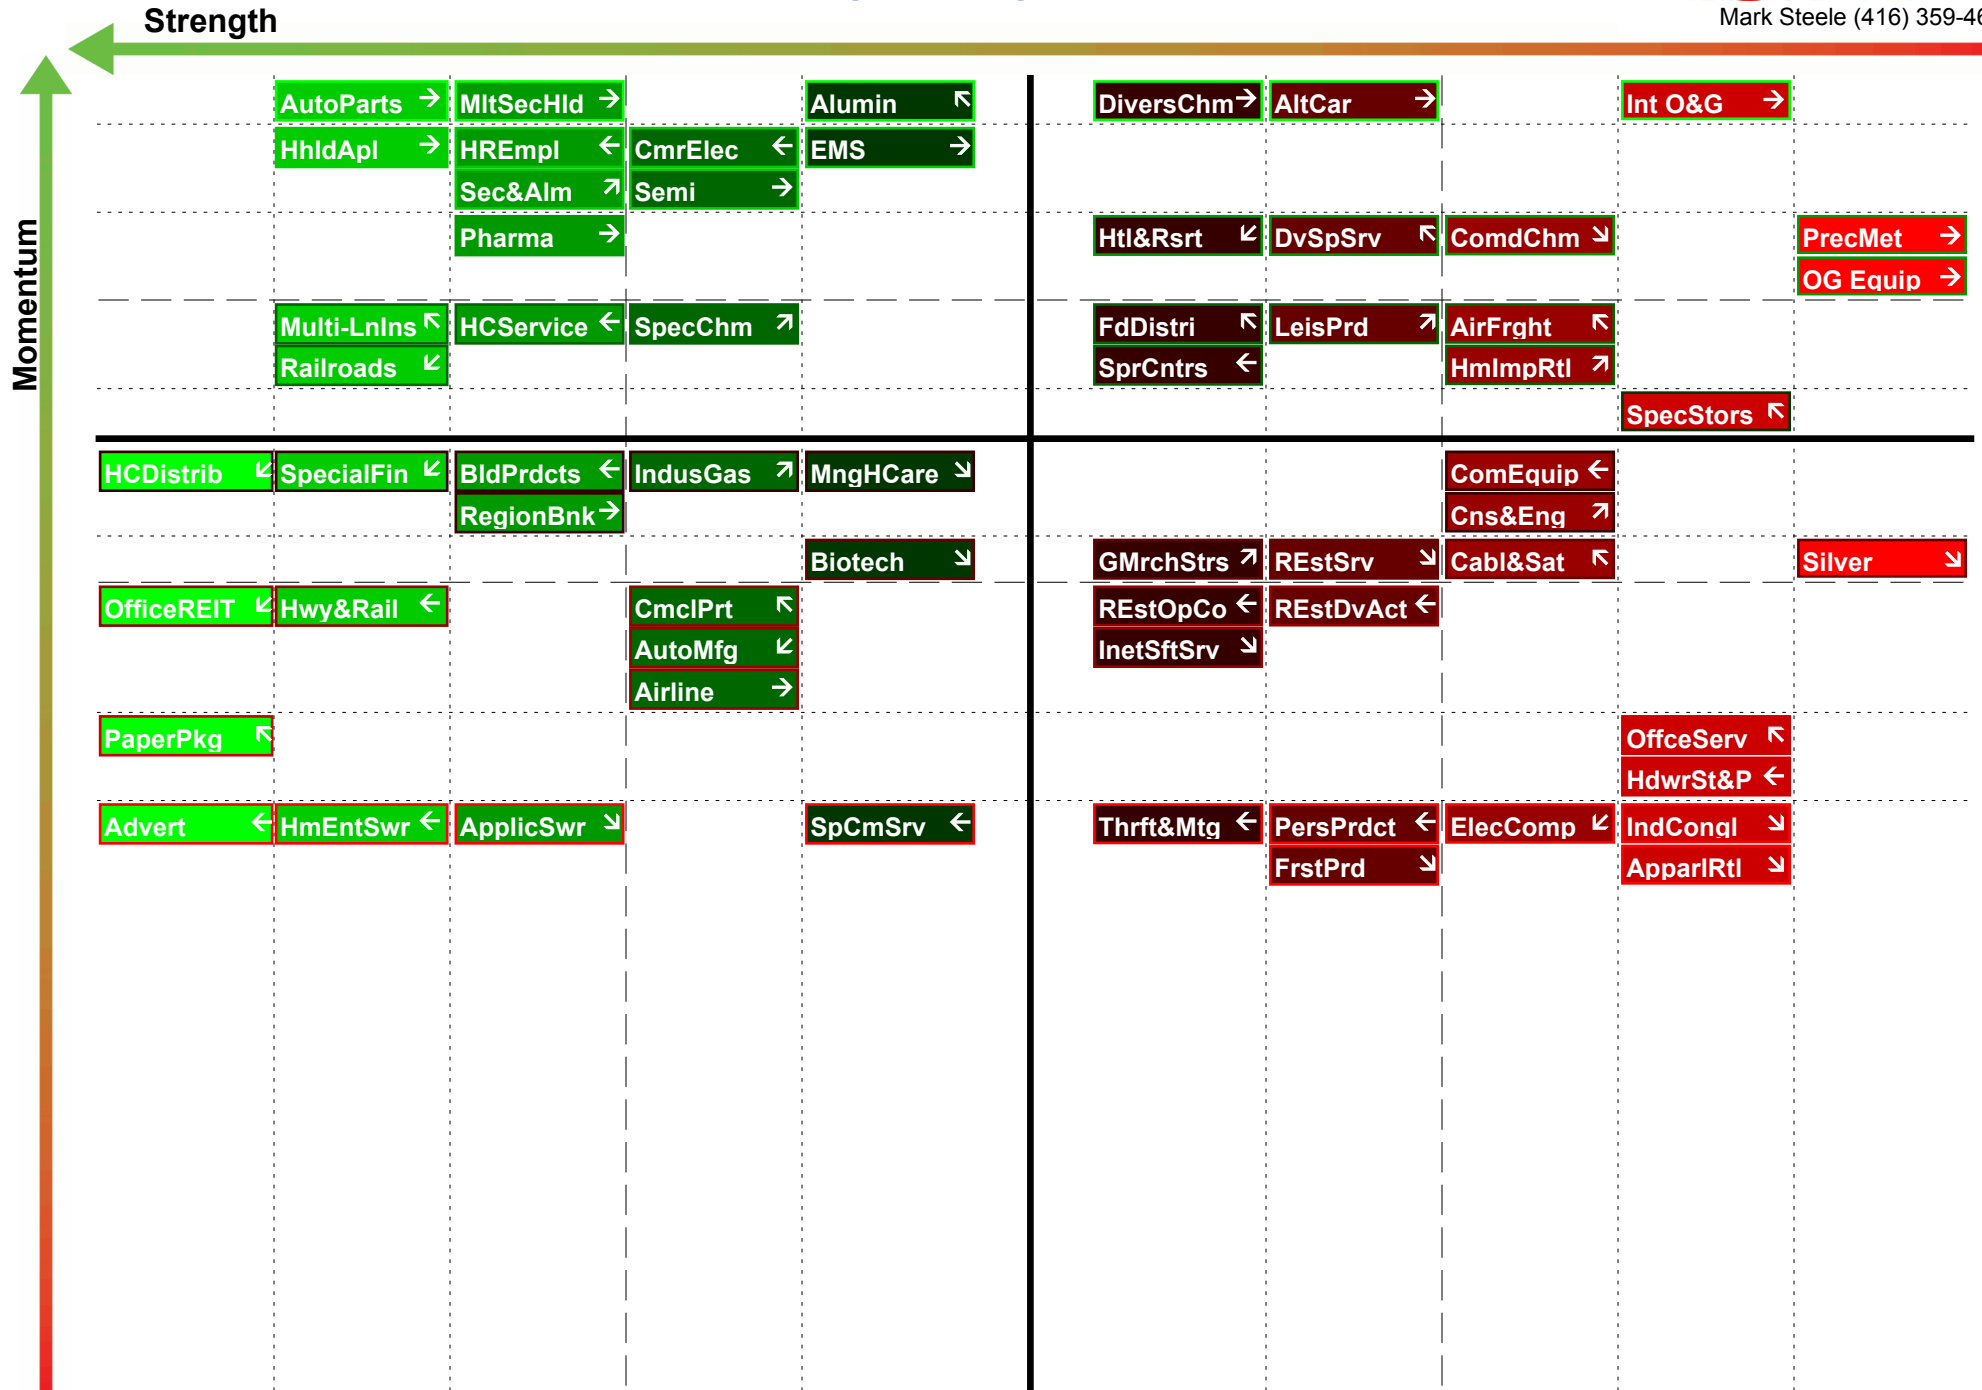

(b) Reward/Risk - how consistent is the median relative strength performance of the sector membership ( /  ranking),

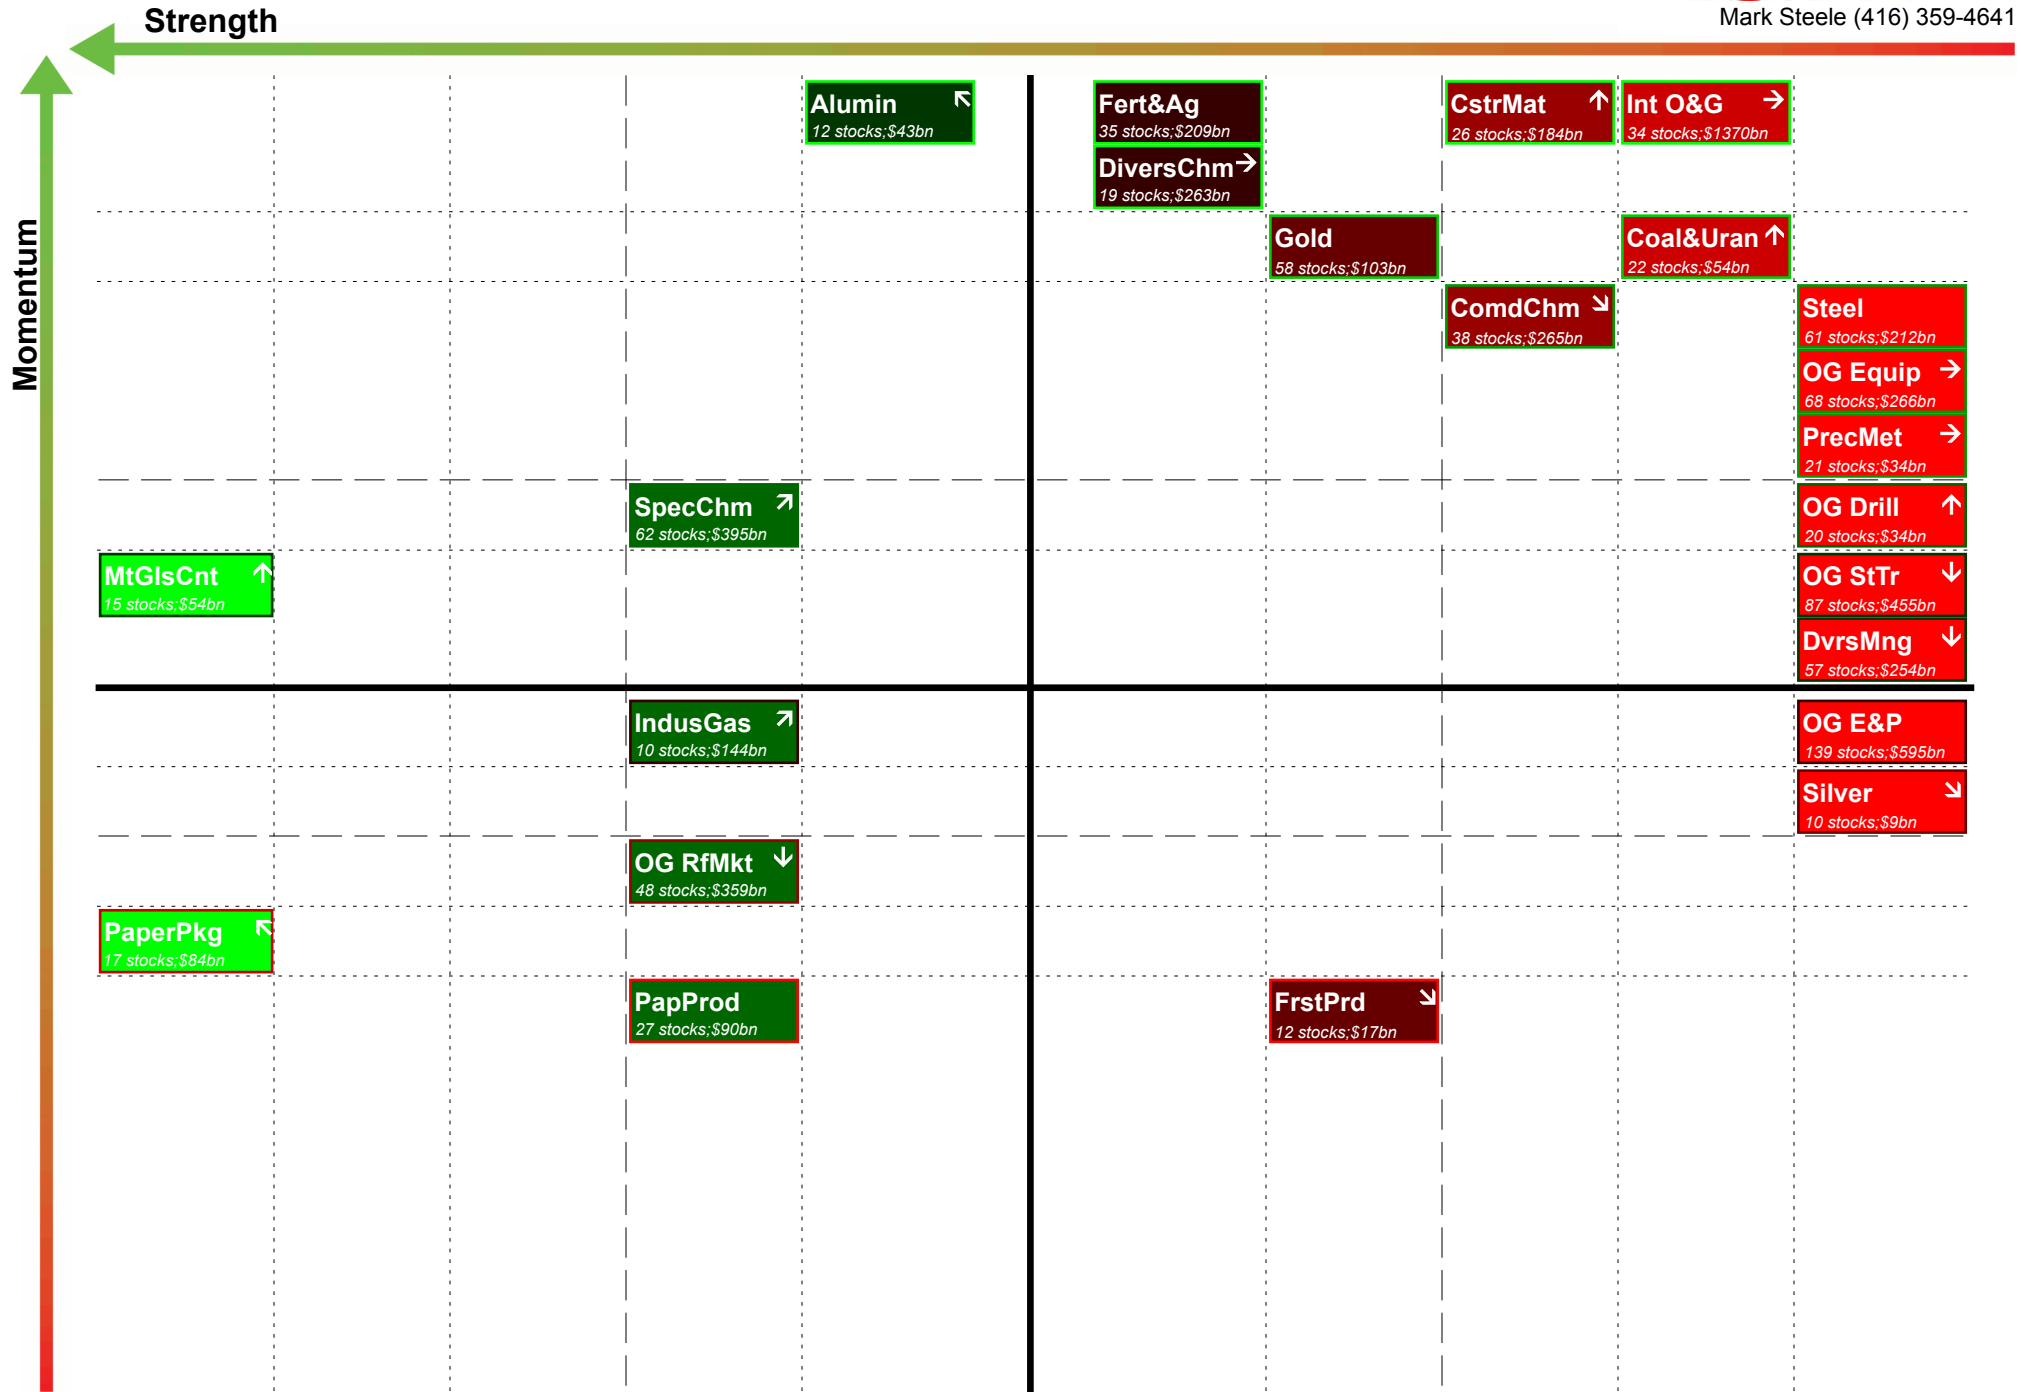

(c) Trend Psn - what is the net percentage of the sector members which are breaking above/below relative strength channels.

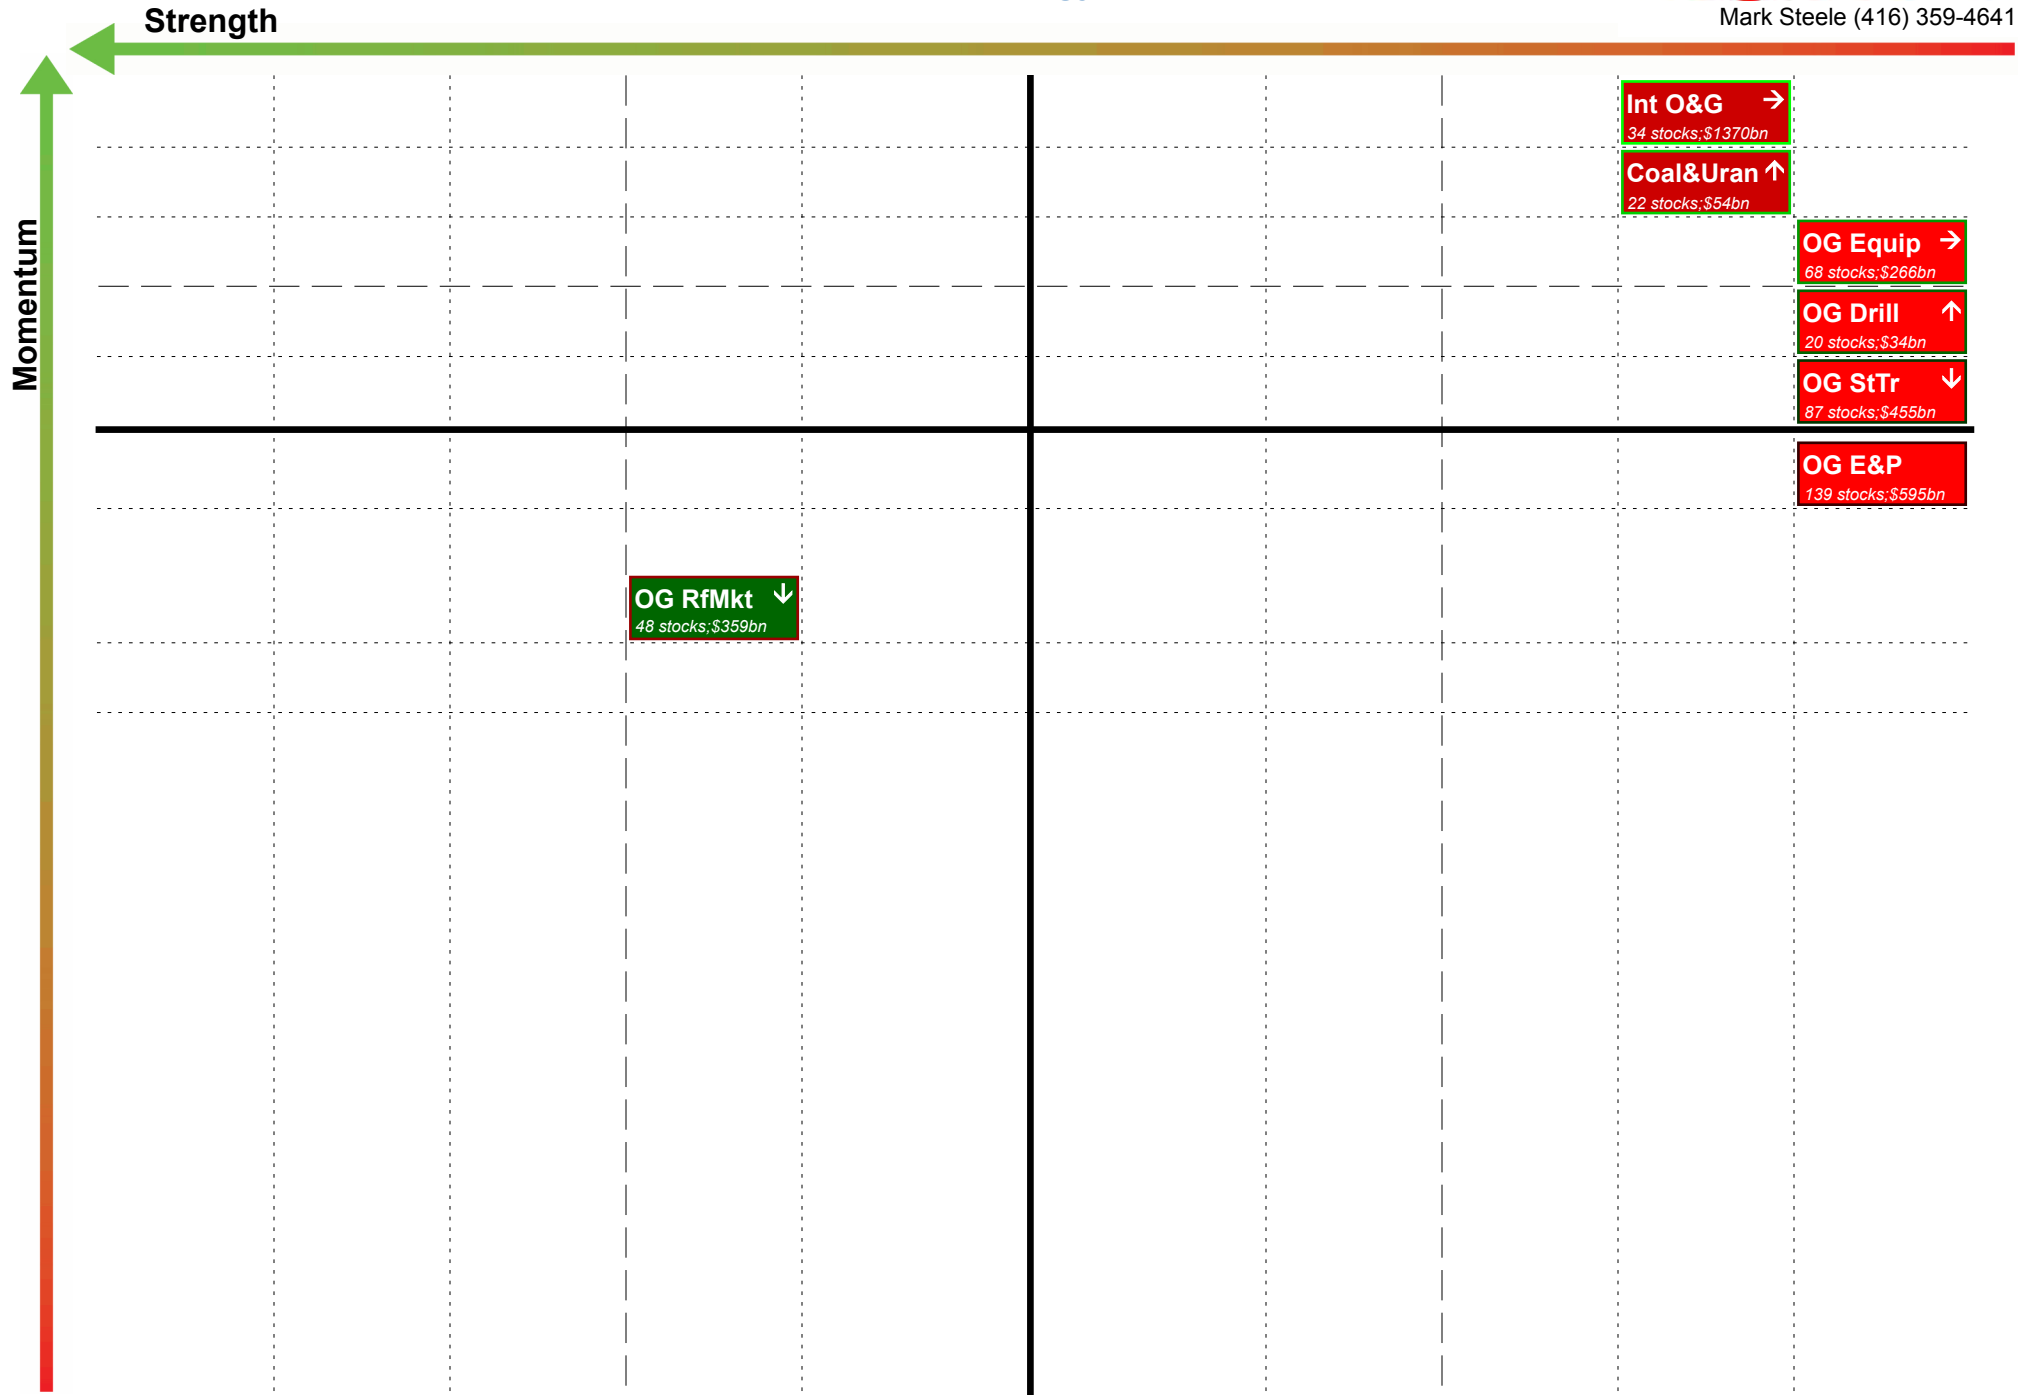

The strength z-Score is weighted 60% towards the trend parameters (% outperforming and reward/risk ratios) and 40% towards the trend positions (reversals of trends). Gridlines are placed at 0.5 increments.

User Guide 1 - Definitions & Dataset

Group Strength

Our Global Group analysis is based on bottom-up equity relative strength analysis as opposed to industry group (index) relative strength analysis.

Strength Decile Defined By

1. What percentage of a groups members are outperforming
2. How consistant that outperformance is
3. How the are members positioned (above/below) vs. their trend channels.

Momentum Decile

Rate of change of strength (change in 5-day moving average)

The Underlying Equity Relative Strength Analysis

Each day, for every equity we cover, our relative strength system assesses the best fit trend from a spectrum which covers a minimum trend duration of six months, and a maximum of 4-years. The "best fit" is the trend which maximizes duration, and minimizes deviation from the trend. Our process is flexible, thorough, and because it is run daily, timely.

The Dataset:

- Over 5,700 securities.
- Groups have a:
 - ...Median depth of 28
 - ...Average depth of 36

Heat Map Colour and Symbol Guide

Strength is highlighted by the background of the group title

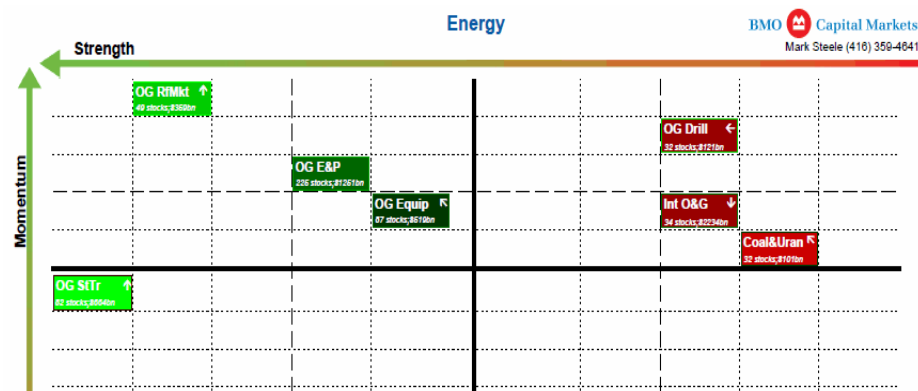

- Bright green = best (1st decile) transitions towards...
- Bright red = worst (10th decile)

Momentum is highlighted in the border of the group title

- Colour map for momentum is the same as strength

Symbols to the right of the group ticker show where a group moved from in the previous session. Below the group symbol we highlight the number and total market capitalization of the members in a group.

Clicking on the group, which brings up the chart via a hyperlink, will help to clarify the moves.

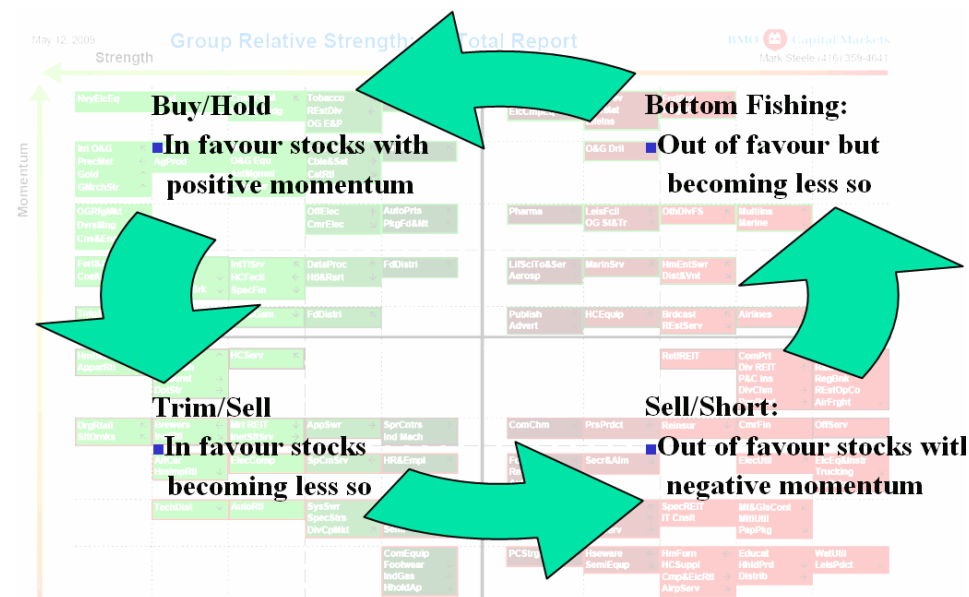

User Guide 2 - Momentum

Our Goals:

- To buy outperforming stocks in favoured groups
- To avoid underperforming stocks in unfavoured groups
- To be alerted of and act on the changes

#1 Rule of Momentum: You can use it only if it exists

- In stable/trending markets, one can buy stocks with high strength and momentum and hold them as long as momentum does not turn negative (trend following).
- In very rotational markets (e.g., where credit, currency, commodity conditions are choppy/changing):
 - Buying high strength and high momentum may be dangerous (buying yesterday's winners).
 - One is better off buying stocks with moderate strength and high momentum (bottom fishing).

User Guide 3 - Buy/Hold/Sell

Buy

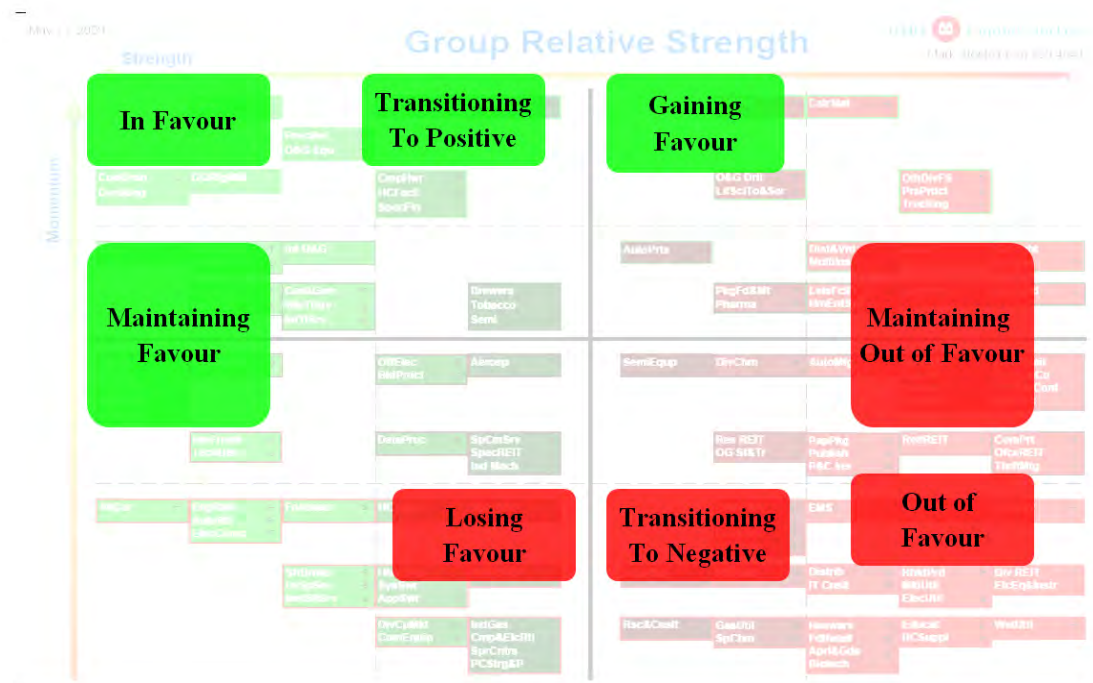

- Groups with high strength and high positive momentum (top left) - “In Favour”
- Groups with moderate strength and high positive momentum - “Transitioning to Positive”
- Groups with mediocre strength and high positive momentum - “Gaining Favour”

Buy/Hold

- Groups with high strength and neutral momentum (middle left) - “Maintaining Favour”

Sell

- Groups with low strength and high negative momentum (bottom right) - “Out of Favour”
- Groups with moderately negative strength and high negative momentum - “Transitioning to Negative”
- Groups with mediocre strength and high negative momentum - “Losing Favour”

User Guide 4 - Hyperlinks To Decile Charts & Stock Selection

- Each group is hyperlinked to a chart that shows the relative strength decile as a function of time, and the moving average (momentum).

- Each chart is hyperlinked to the group membership, in our RS Filter Toolkit.
