*Three terms define the relative performance Z-Score rating versus the markets (US = S&P 500; GBL = MSCI AC World; CDA = S&P/TSX Composite)

(a) % Outperforming - what percentage of sector members is outperforming the market,
(b) Reward/Risk - how consistent is the median relative strength performance of the sector membership ( / ranking),
(c) Trend Psn - what is the net percentage of the sector members which are breaking above/below relative strength channels.

The strength z-Score is weighted 60% towards the trend parameters (% outperforming and reward/risk ratios) and 40% towards the trend positions (reversals of trends). Gridlines are placed at 0.5 increments.

See Help Pages for further details.

User Guide 1 - Definitions & Dataset

Group Strength
Our Global Group analysis is based on bottom-up equity relative strength analysis as opposed to industry group (index) relative strength analysis.

Strength Decile Defined By
1. What percentage of a group's members are outperforming
2. How consistent that outperformance is
3. How the are members positioned (above/below) vs. their trend channels.

Momentum Decile
Rate of change of strength (change in 5-day moving average)

The Underlying Equity Relative Strength Analysis
Each day, for every equity we cover, our relative strength system assesses the best fit trend from a spectrum which covers a minimum trend duration of six months, and a maximum of 4-years. The "best fit" is the trend which maximizes duration, and minimizes deviation from the trend. Our process is flexible, thorough, and because it is run daily, timely.

The Dataset:
- Over 5,700 securities.
- Groups have a:
  ...Median depth of 28
  ...Average depth of 36

Heat Map Colour and Symbol Guide
Strength is highlighted by the background of the group title
- Bright green = best (1st decile) transitions towards...
- Bright red = worst (10th decile)
Momentum is highlighted in the border of the group title
- Colour map for momentum is the same as strength
Symbols to the right of the group ticker show where a group moved from in the previous session. Below the group symbol we highlight the number and total market capitalization of the members in a group. Clicking on the group, which brings up the chart via a hyperlink, will help to clarify the moves.
User Guide 2 - Momentum

Our Goals:
- To buy outperforming stocks in favoured groups
- To avoid underperforming stocks in unfavoured groups
- To be alerted of and act on the changes

#1 Rule of Momentum: You can use it only if it exists

- In stable/trending markets, one can buy stocks with high strength and momentum and hold them as long as momentum does not turn negative (trend following).

- In very rotational markets (e.g., where credit, currency, commodity conditions are choppy/changing):
  - Buying high strength and high momentum may be dangerous (buying yesterday’s winners).
  - One is better off buying stocks with moderate strength and high momentum (bottom fishing).
User Guide 3 - Buy/Hold/Sell

Buy
- Groups with high strength and high positive momentum (top left) - “In Favour”
- Groups with moderate strength and high positive momentum - “Transitioning to Positive”
- Groups with mediocre strength and high positive momentum - “Gaining Favour”

Buy/Hold
- Groups with high strength and neutral momentum (middle left) - “Maintaining Favour”

Sell
- Groups with low strength and high negative momentum (bottom right) - “Out of Favour”
- Groups with moderately negative strength and high negative momentum - “Transitioning to Negative”
- Groups with mediocre strength and high negative momentum - “Losing Favour”
- Each group is hyperlinked to a chart that shows the relative strength decile as a function of time, and the moving average (momentum).

- Each chart is hyperlinked to the group membership, in our RS Filter Toolkit.
ETF Related Disclosures

As an authorized participant or otherwise, BMO Capital Markets acquires securities from the issuers for the purposes of resale. BMO Capital Markets and its affiliates seek to provide brokerage services to, and do other business with, ETFs covered by this report. BMO Capital Markets and its affiliates seek to enter into securities and other transactions on a principal basis with, and may borrow securities from, ETFs covered by this report. BMO Capital Markets makes a market in this security.

The BMO ETFs issue, or will issue, Units directly to Designated Brokers and Underwriters. The initial issuance of Units of a BMO ETF will not occur until it has received, in aggregate, subscriptions sufficient to satisfy the TSX's original listing requirements. BMO Nesbitt Burns Inc., an affiliate of the Manager, will act as a Designated Broker for the BMO ETFs. Units of each of the BMO ETFs are issued and sold on a continuous basis and there is no maximum number of units that may be issued. BMO Asset Management is the trustee, manager, portfolio manager, promoter and valuation agent of the BMO ETFs and is responsible for the administration of the BMO ETFs. Unitholders may redeem Units for cash, subject to a redemption discount. Unitholders may also exchange a Prescribed Number of Units (or integral multiple thereof) for Baskets of Securities of the Constituent Issuers held by each BMO ETF and cash, or, with respect to certain BMO ETFs, cash only.

Securities legislation in certain Canadian provinces prohibits registrants from recommending, or cooperating with any other person in recommending, in any circular, pamphlet or similar publication that is distributed with reasonable regularity in the ordinary course of its business, that securities of the registrant or a related issuer, or in the case of a distribution, that securities of a connected issuer, be purchased, sold or held unless such publication contains a statement of the relationship or connection between the registrant and the issuer. BMO Nesbitt Burns Inc. is an indirect wholly-owned subsidiary of Bank of Montreal. Accordingly, Bank of Montreal is a related and connected issuer of BMO Nesbitt Burns Inc. TO U.S. RESIDENTS: This publication, to the extent it refers to Bank of Montreal securities, has not been approved or distributed by BMO Capital Markets Corp. or BMO Nesbitt Burns Securities Ltd. and affiliates of BMO Nesbitt Burns Inc. It is intended for distribution in the U.S. by BMO Nesbitt Burns Inc. only to Major U.S. Institutional Investors (as defined in SEC Rule 15a-6 under the Securities Exchange Act of 1934, as amended).

Investors should consider the investment objectives, risks, and charges and expenses of the investment company carefully before investing. The prospectus for the ETF contains this and other information about the investment company and should be read carefully before investing. Clients may obtain prospectuses for the ETFs mentioned in this report from the ETF distributor or the exchange upon which it is listed. This report is not a prospectus or an offer to buy or sell any security, or to participate in any trading strategy.
For a complete list of ETFs mentioned in this report, please refer to the following link, ETF Database.

Investors in ETFs with international securities may assume currency and political risk. Sector and commodity specific ETFs are not diversified and may focus their investments entirely in a single sector, commodity, or basket of commodities. As a result, the ETFs will involve a greater degree of risk than an investment in other diversified fund types.
ETF Related Disclosures (continued)
ETFs designed to track an index or asset may experience a discrepancy between the ETF’s performance and the performance of its target index known as tracking error. A variety of factors can create a performance gap between ETF and its target index such as the impact of transaction fees and expenses incurred by the ETF, changes in composition of the underlying index/assets, the ETF portfolio manager’s replication strategy and sampling techniques, and the timing of purchases and redemptions of ETF’s shares. Inverse and Leveraged ETFs: Most leveraged ETFs seek to provide a multiple of the investment returns of a given index or benchmark on a daily basis. Inverse ETFs seek to provide the opposite of the investment returns, also daily, of a given index or benchmark, either in whole or by multiples. Due to the effects of compounding and possible correlation errors, leveraged and inverse ETFs may experience greater losses than one would ordinarily expect.
